Check the logic

1. Knowing this situation, I had a plan B for engineering studies at Polytech.
2. Given my interests and academic background, the school offered me two options: computer science or biomedical engineering.
3. I also applied for biomedical engineering since the medical aspect was really attractive to me. For some time I was really hesitating between the two options.
4. I have always been curious about how things work, especially as a child.
5. Material engineering allows me to work everywhere I want, such as civil, aeronautical, aerospace or automotive engineering.
6. As I cared about the environment, I went for the materials specialization.
7. Even if there is a lot of electronics and computer science, it is more concrete and practical than what I have learnt during my PEIP, as it is directly related to medical devices. It also helps me understand the principles of the devices.
8. However, I want to try medical school again after my master's degree in biomedical engineering.

Check the grammar

1. While I mostly like what we do in this field, there are some sides of it, like data engineering, that I don't see myself working on in the future.
2. I chose materials engineering because of its wide range of applications.
3. Even if some materials interest me less than others, this specialty allows me to develop my knowledge.
4. Nevertheless, I do have moments when I regret not choosing medicine, as it was my dream job from a very young age.
5. I spent a lot of time on my computer trying to understand how it worked.
6. Unlike other specialties, the materials field is very broad.
7. Because I liked physics, I chose the biomedical specialty.
8. When I started my studies, I didn't really know what I wanted to do.
9. Besides, none of the others appealed to me as much as GBM.
10. As a result, at Polytech Lyon we are more prepared to work as technicians in the future.
